

## Röchling's first "ringless" 5th wheel lube disk for semi trailers!

**New!**

New design has eliminated the need for the steel retaining ring by introducing 4 solid yet flexible "teeth" that are die cut directly into the plastic.

The steel ring was always the "weak link" in previous designs and often was not secure enough to keep the disk in place. As a result a damaged ring could prevent a successful lock between king pin and 5th wheel.

Röchling Engineering Plastics offers a comprehensive product line in the USA and Canada of mudflaps and accessories for the trucking industry.

### Benefits & Features :

- Ringless for easier, more secure installation
- Tighter ID for a more consistent installation even on older king pins
- By eliminating the steel retaining ring, no need to inventory replacement rings
- Silicone additive for additional lubrication
- Curl resistant polymer prevents the disk from sagging once installed - less sagging means less chance the disk could be damaged while the tractor and trailer are being hooked
- Sold either in bulk or packaged 5 units per box
- Traditional disk with steel ring might typically fall off after the initial "un-hook", new design may stay in place for a dozen or more cycles

### Part Number: #108357

*\*\*\*\*Intended for use on trailers with a standard 2.875" dia. king pin which is not worn/undersized. Driver should always verify a successful lock between 5th wheel and king pin prior to any trip\*\*\*\**
