

SPECTRUM ASSEMBLED CLUTCH PART NUMBER BREAKDOWN

This is a part number for a complete, assembled Spectrum clutch. The part number can be broken down into four parts. Each of the four parts represents a component.

RV0210503-01

The first two components (head and bracket) are always required, but not all clutches contain a pilot adapter or special adapter. If one of these components is not required, there will be double zeros. So for example RV0210500-01 would mean that there is not a pilot adapter, since there are double zeros in the pilot adapter section of the part number, but there is a special adapter (RV-S01)
